Associated challenges

Intelligaia has played a pivotal role in streamlined Synnex's innovation journey with a user-friendly, complexity-busting experience. Intelligaia led the creation of a functional codebase and versatile component system, collaborating with front-end developers, designers, and developers

Design sprint workshop

In our first Discovery Workshop with Synnex, we collaboratively explored needs, generated ideas, and proposed solutions. This interactive session set the stage for a creative journey, fostering understanding and shaping our impactful partnership.

Design Sprint Workshop helps teams and organizations to improve their communication and collaboration skills, and achieve their business goals more effectively.

CX-Strategy

We've jumped on the CX journey by collaborating with stakeholders, product owners, and customers to map a clear CX roadmap. This strategic initiative ensures a unified vision for enhancing the overall customer experience.

Multiple Persona

We were able to narrow down on the main personas, list their pain points and used this knowledge to come up with user stories and use case scenarios.

UX Mapping Workshop Persona

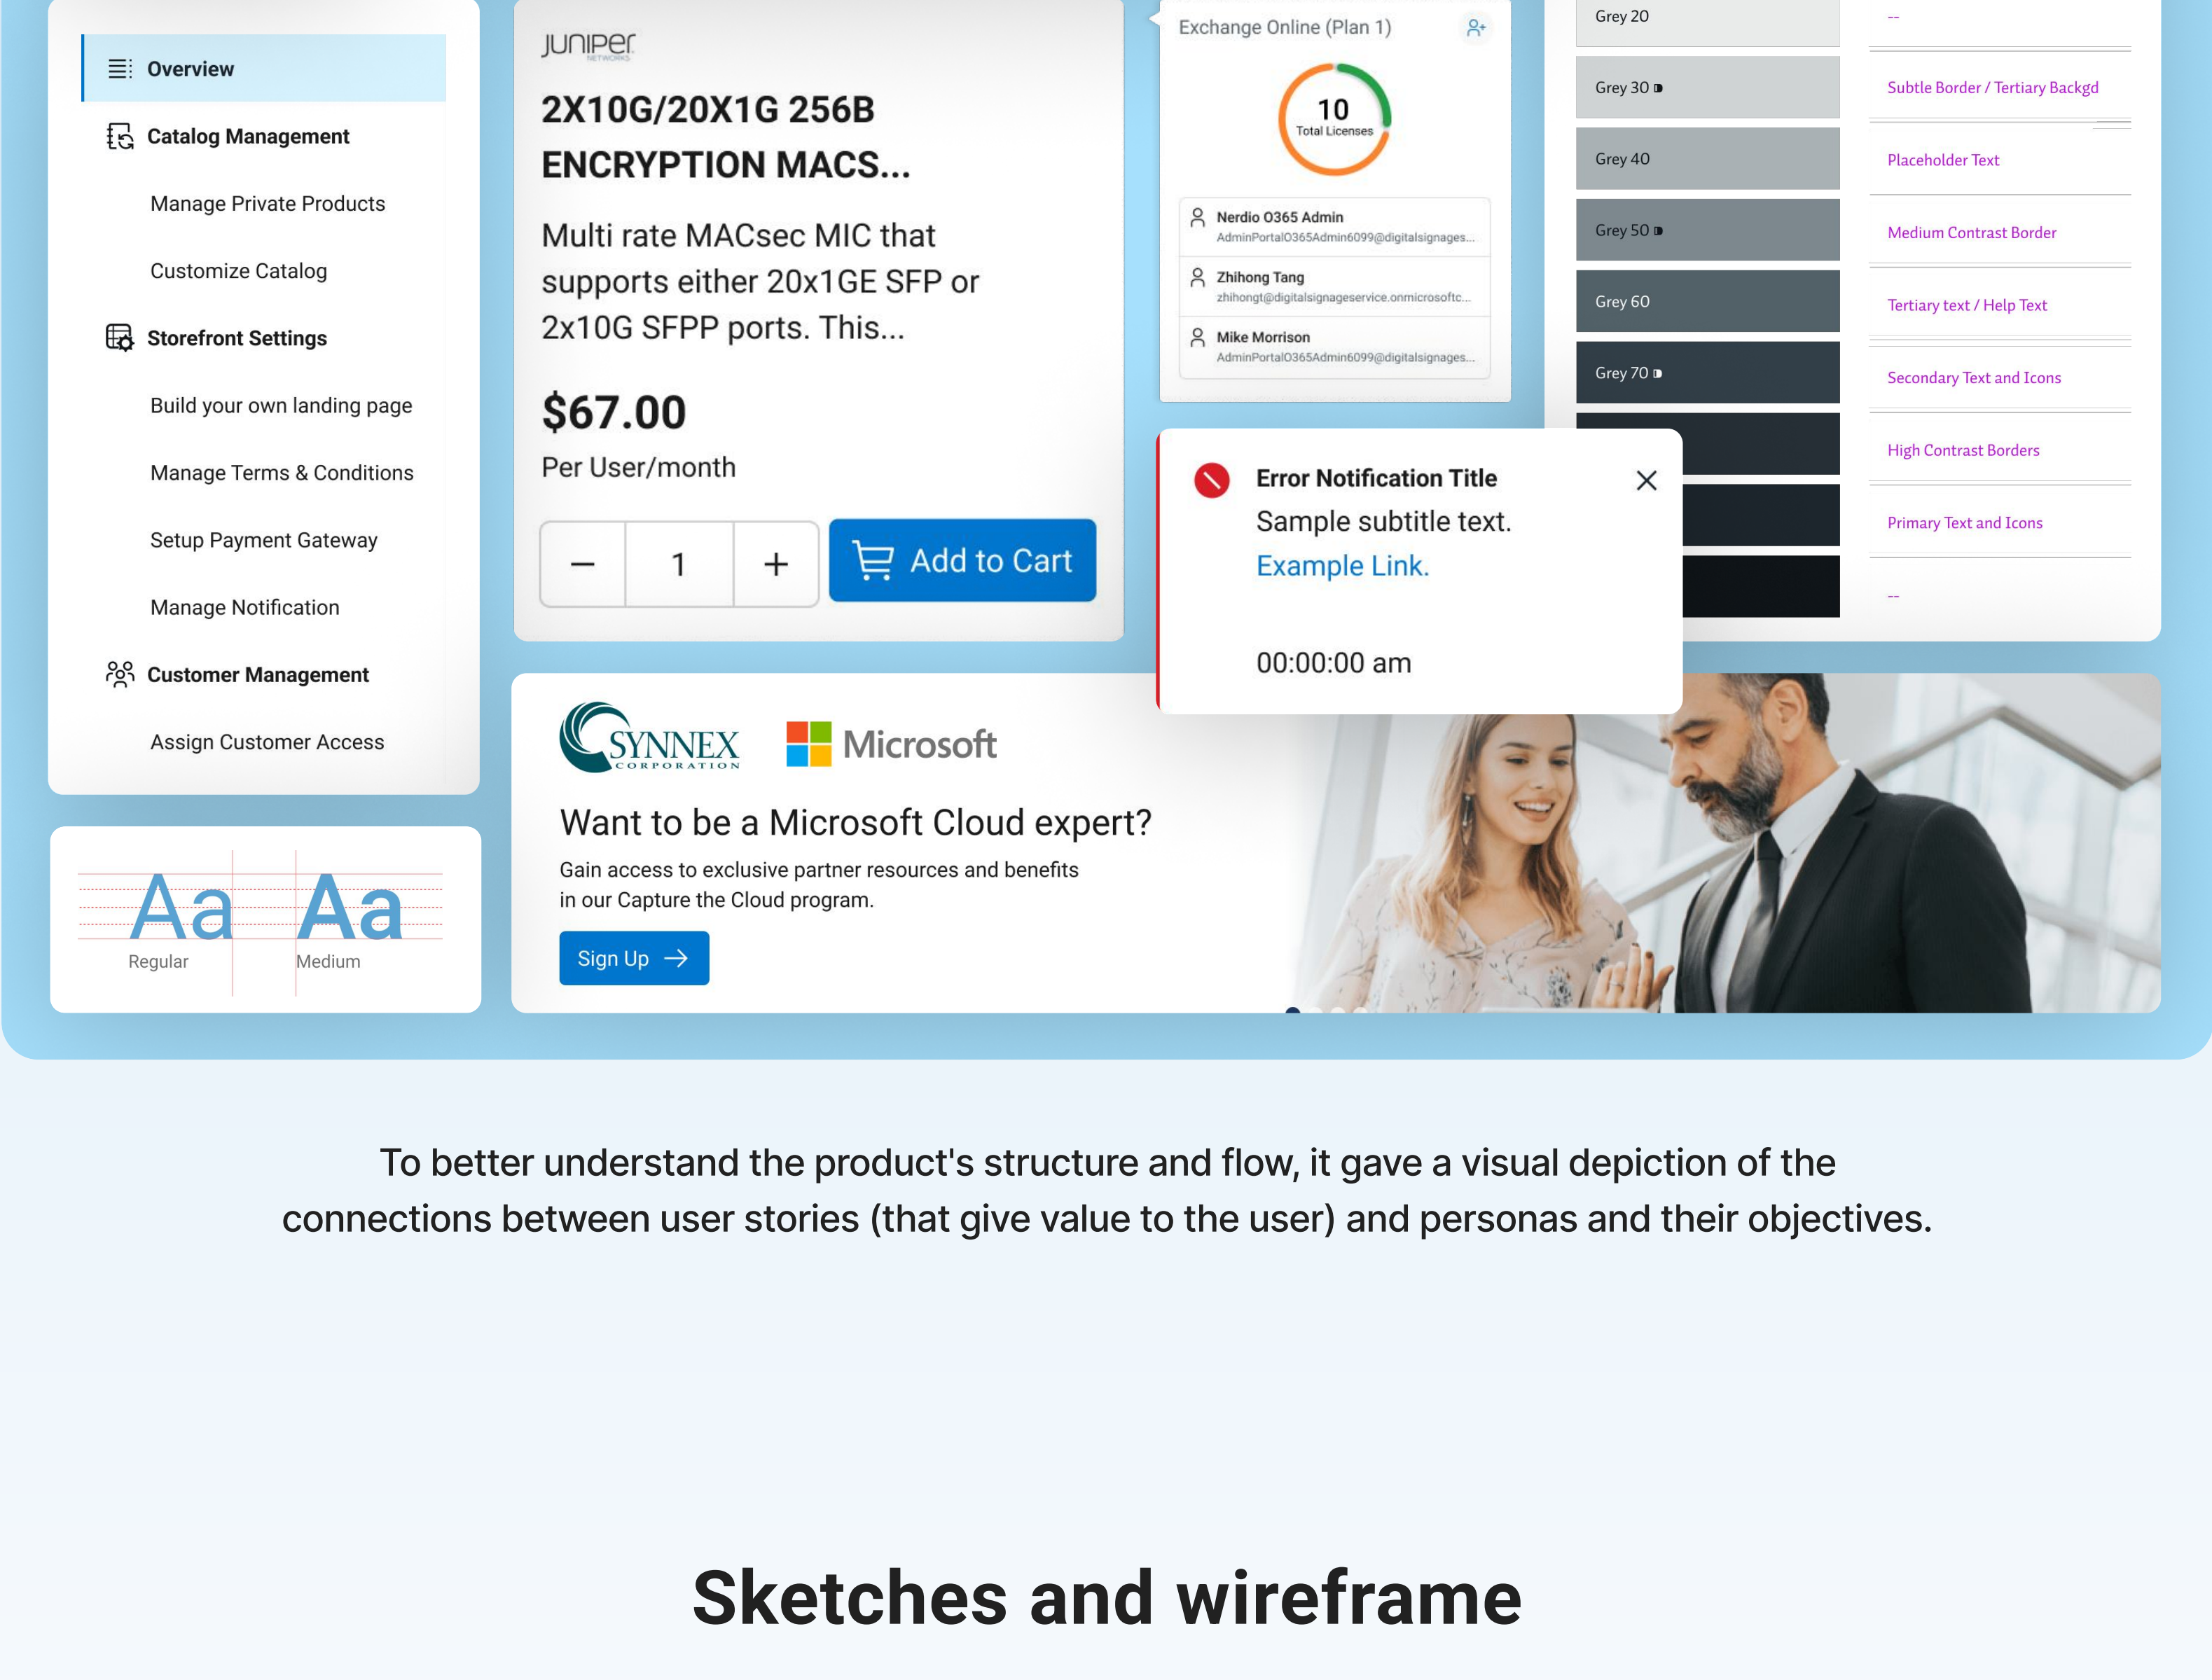

IA & Customer Journey Map

By focusing on user needs and organizing information logically, CJM and IA help create a user experience that is not only easy to use but also enjoyable and engaging.

CJM Information Architecture

Design system

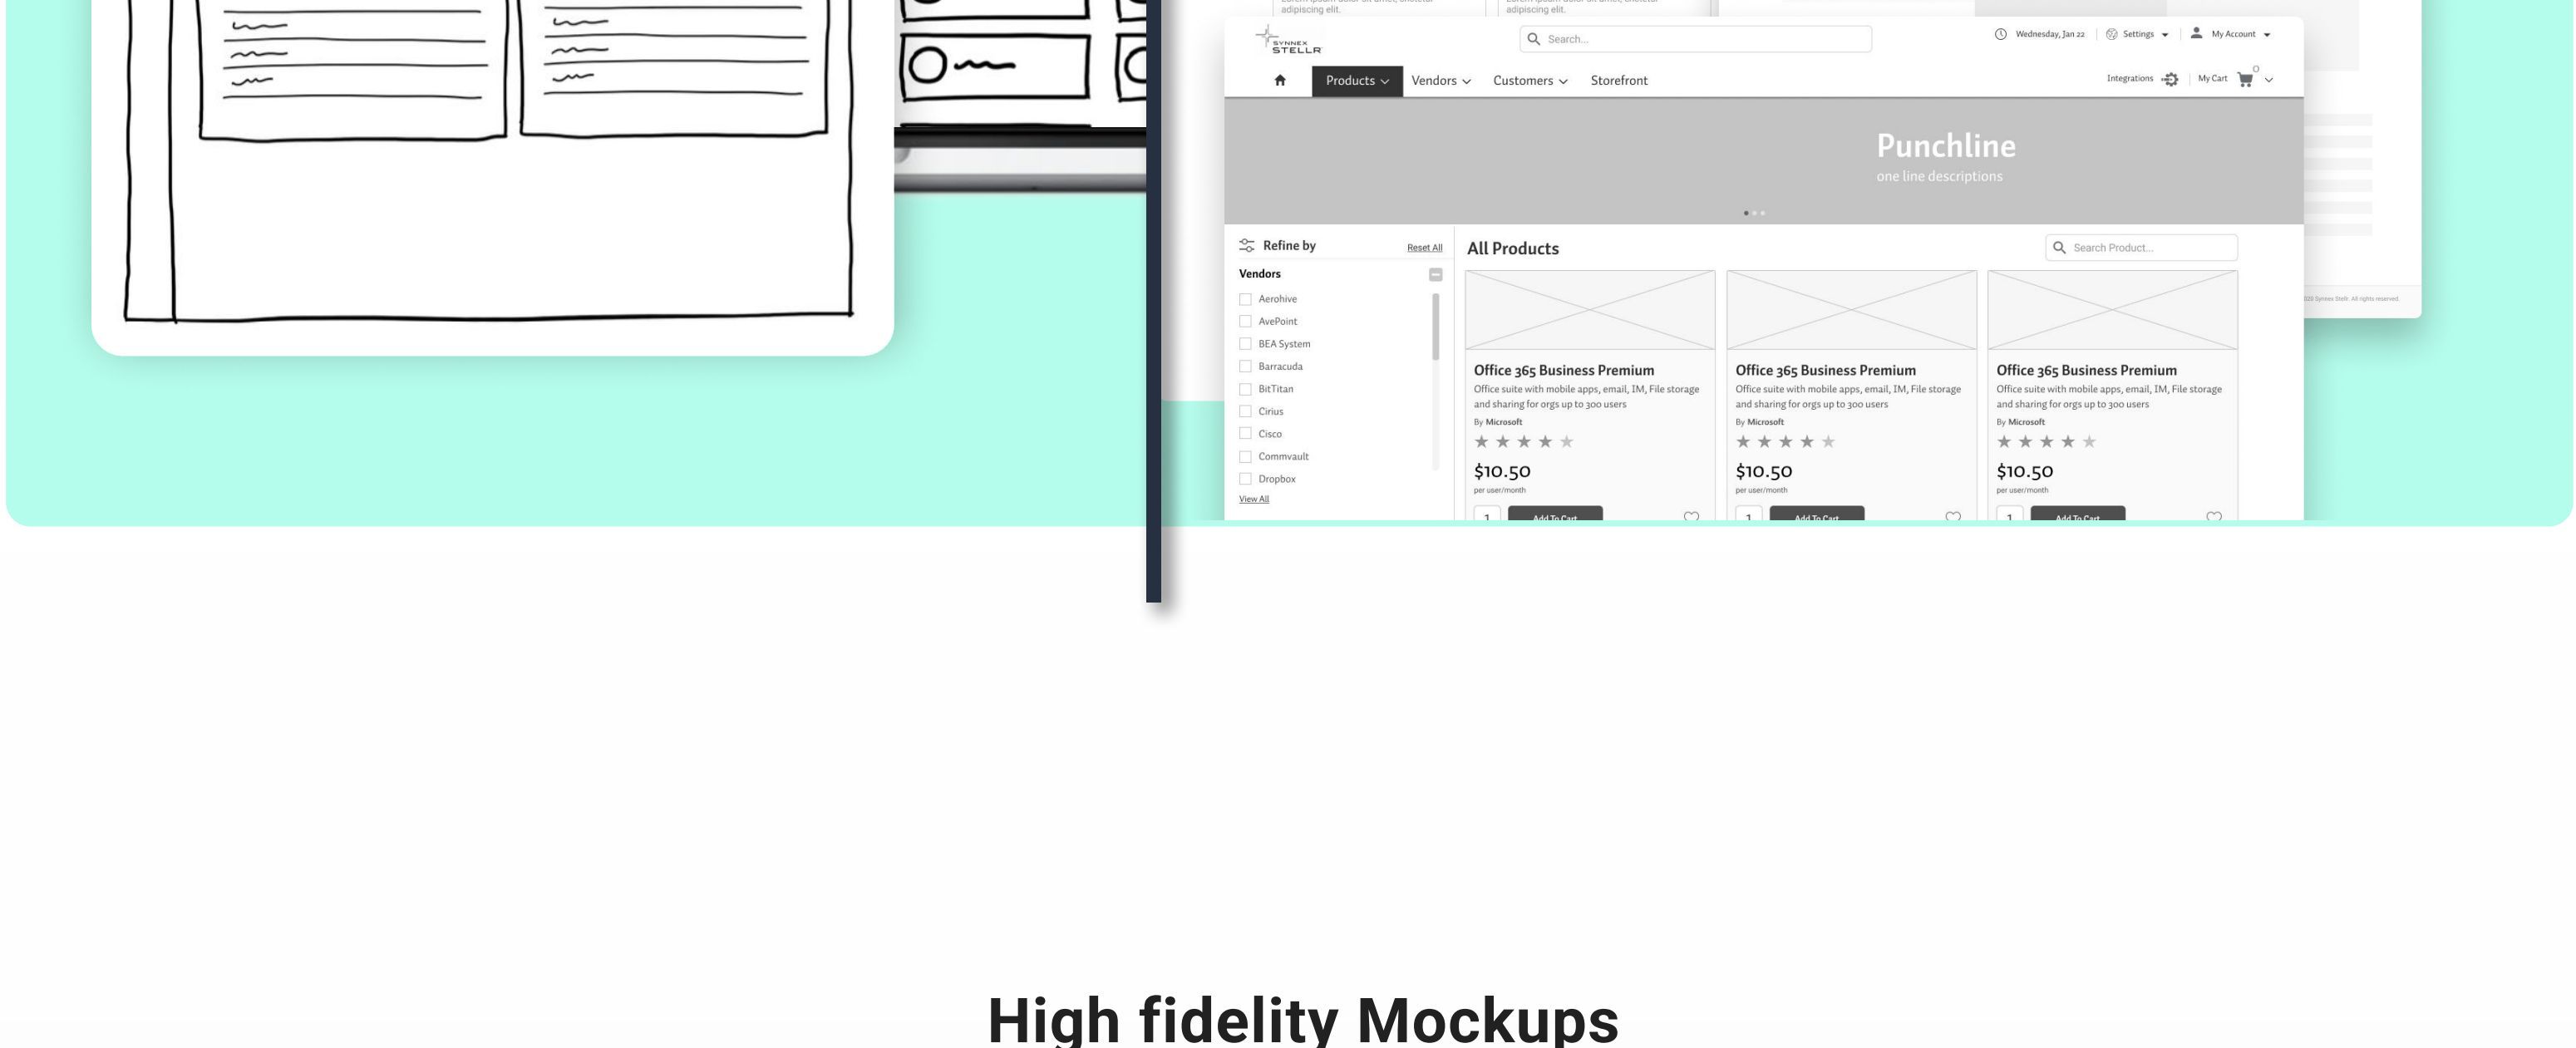

A visual representation of the user journey helps to identify the gaps in the customer journey, reveal the disconnected experience and task dependency between the different personas.

To better understand the product's structure and flow, it gave a visual depiction of the connections between user stories (that give value to the user) and personas and their objectives.

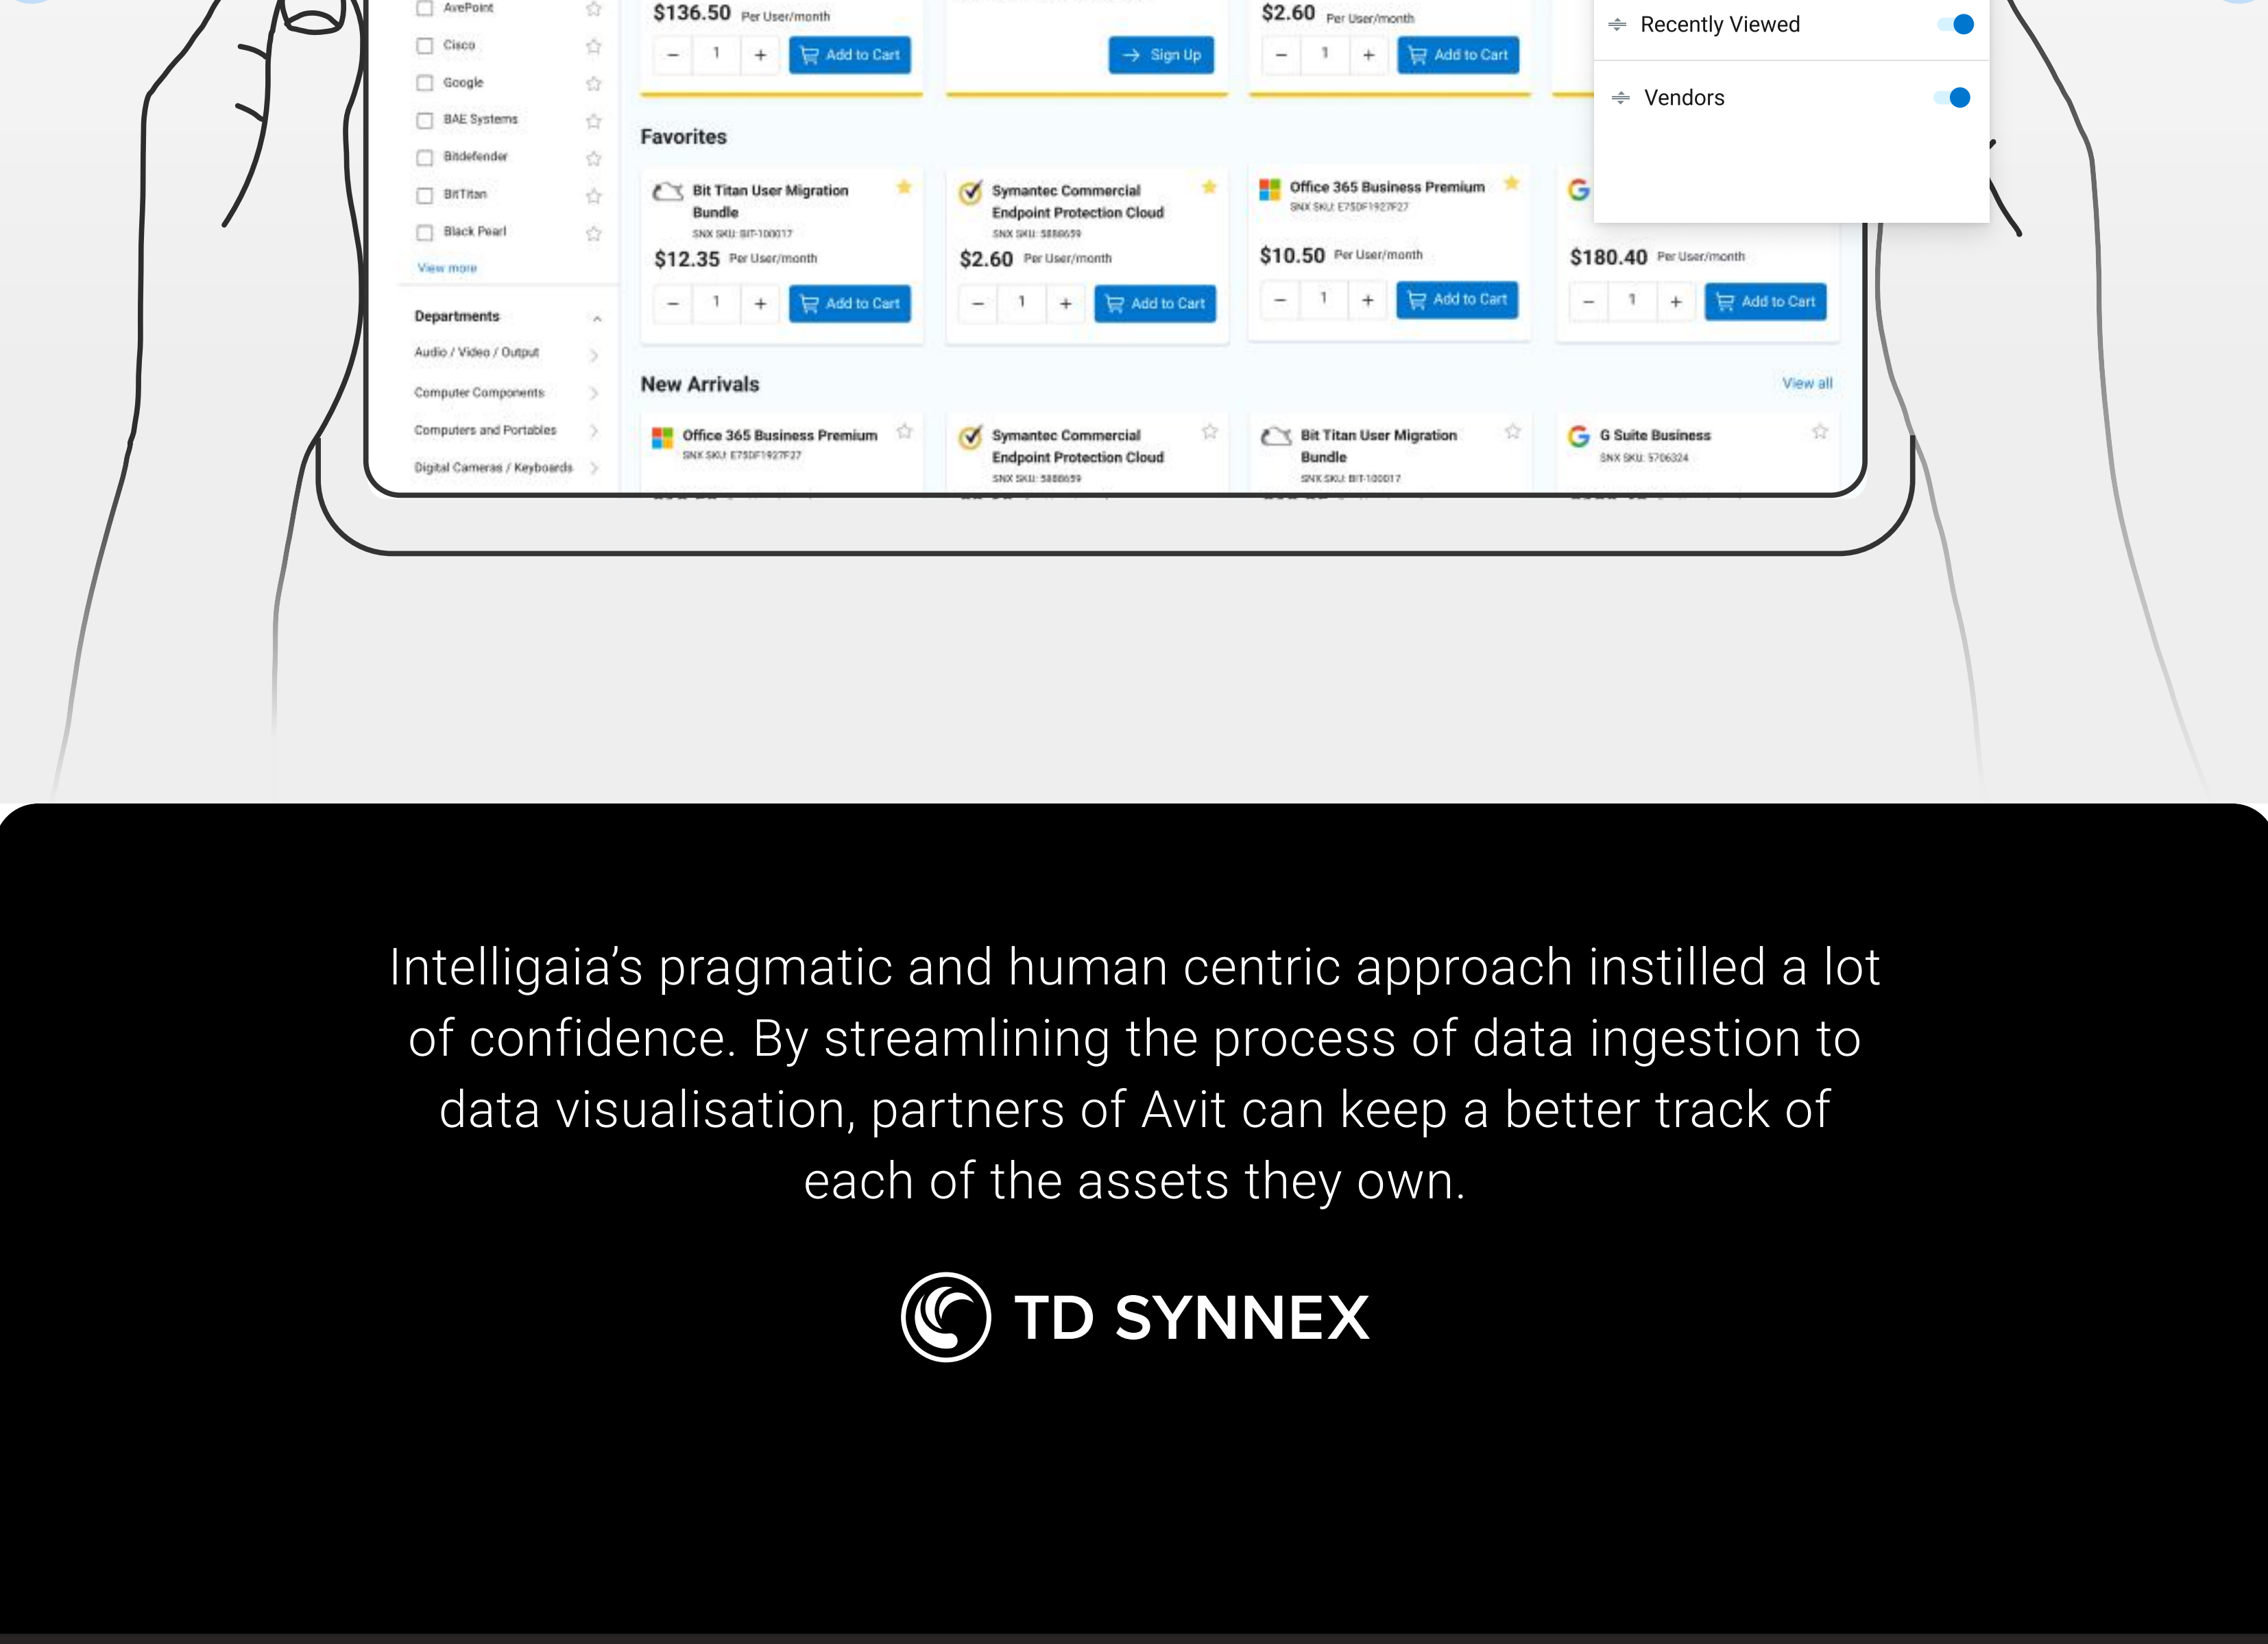

Sketches and wireframe

In the iterative journey of crafting the Synnex Stellr transformation, sketches and wireframes emerged as pivotal artifacts, capturing the essence of our design process. These visual representations served as dynamic snapshots, evolving from raw ideas to refined concepts.

High fidelity Mockups

We help Synnex expand its design system to the next level. This also acted as their brand guide and strategy.

Intelligaia's pragmatic and human centric approach instilled a lot of confidence. By streamlining the process of data ingestion to data visualisation, partners of Avit can keep a better track of each of the assets they own.
